Job Description
Instructor for Explore Engineering Innovation: In-Person

Course Description:
Explore Engineering Innovation (EEI) is a summer course for high school students who would like to learn more about engineering. EEI is administered by the Center for Educational Outreach in the Whiting School of Engineering at Johns Hopkins University. The mission of the Center is to increase the number of youth pursuing STEM education and careers. Explore Engineering Innovation is designed to give students a significant understanding of engineering, allowing them to make informed college and career decisions.

Explore Engineering Innovation is based on an introductory engineering course taught to undeclared first-year engineering students at JHU. EEI covers a range of fundamental engineering topics including materials science, computer science, civil, mechanical, and chemical engineering. The course includes lectures but focuses on hands-on lab experiments and group data analysis. Graded coursework includes lab reports, homework assignments, a group presentation, and a design project. At the end of the course, students who earn an A or B receive JHU credit for the course. Ultimately, the goal of the course is to expose students to engineering principles, allow them to apply the math and science they learn in high school to solving real world problems, and to help students develop critical thinking skills.

Instructor Description:
We are looking for Instructors who understand, appreciate, and can apply an instructional style that emphasizes the process of problem-solving rather than memorizing material. The object is to engage students by getting them to think and participate rather than being lectured to. Each EEI class has a broad range of 16-24 students with diverse backgrounds and Instructors must be prepared to accommodate a multitude of learning styles. Finally, the Instructor must be able to engage, encourage and excite the students.

The ideal candidate will have experience teaching at the college level and a PhD in an engineering discipline that is covered in the EEI course. Substantial experience in engineering practice along with teaching is also acceptable. It should be noted that each EEI class is taught by a team comprised of an Instructor and a Teaching Fellow (TF) who is a high school math or science teacher.
Explore Engineering Innovation In-Person Course Dates:
In 2022, the course dates are July 5 to July 29, Monday through Friday, from 9 a.m. to 3 p.m. A few of our sites operate on a different schedule. Please check our website (http://ei.jhu.edu/locations/) for site-specific dates and times.

Instructor Responsibilities:
The responsibilities of each Instructor include but are not limited to:

- Instructors must be present and available during the entire course.
- Instructors must be prepared to spend time independently to review course materials and complete the online training program prior to the first day of the course.
- Instructors should be able to deliver lectures on a wide range of engineering topics and be able to relate the curriculum to high school students.
- Instructors must take the lead in organizing the course, giving lectures, and ensuring assignments are graded and returned to students in a timely manner.
- Instructors must work with the Teaching Fellow to develop a sense of community for the high school students participating in the class.
- Instructors must work with the Teaching Fellow to manage labs and projects.
- Instructors must be available for supplementary instruction outside of class hours.
- Instructors must ensure that students receive their graded assigned work promptly – within 1-2 days of the assignment due date – and provide detailed feedback to students so that they are able to learn from the activity and improve their future performance.
- Instructors must ensure that grades are posted to the learning management system in a timely manner.
- Instructors must ensure that child safety protocols are upheld.

Explore Engineering Innovation Instructors receive an academic appointment from Johns Hopkins University’s Academic Council and are subject to prescreening.
